

# INTRODUCTION

Effective Jan 1, 2010, this Control Section Map Book shall supersede all previous printings. The maps contained herein have been changed to conform to the Oklahoma Highway Data File. All lengths are recorded to the: nearest 0.01 hundredth mile / kilometer. If beginning or ending point locations are in doubt, refer to the Control Section Log. Any errors found in this report should be brought to the attention of the Planning and Research Division, G.I.S. Management Branch. The suffix "P" on a control section number denotes Projected Highway. Normally, the route number on Projected Highways will be "P & S". Henceforth, control section numbers and lengths will be revised only when construction changes require it or when, due to route number changes, there is no longer a continuous route number that can be assigned to the entire section.

The Planning and Research Division, G.I.S. Management Branch, is responsible for assignment and revision of control section numbers and lengths. Contact them for control section information not contained in this publication. For Additional copies call (405) 521-2727 or 521-2728.

Control section numbers must contain the county number. For location identification purposes, they normally assigned a continuous route number. In this report, they are shown with the numerical portion of the route first, the county code second, and the control number last.
