Introduction

The Oklahoma Department of Transportation (ODOT) Planning and Research Division sponsored the first inventory and evaluation of historic bridges in Oklahoma. The study, completed in 1993, was conducted under an agreement between ODOT and the Oklahoma State Historic Preservation Office (SHPO). The investigation was undertaken by the Center for Historic Preservation and Technology, Texas Tech University, and directed by Joseph E. King. The scope of this project was the documentation and evaluation of metal truss bridges and concrete and stone arch bridges built in Oklahoma before 1955. This project resulted in the report *Spans of Time: Oklahoma Historic Highway Bridges*, and the documentation 1,555 bridges and the designation of 171 of them as eligible for the National Register of Historic Places (NRHP).

The passage of time and the demolition of bridges documented in the 1989-1992 survey made a re-assessment of the remaining bridges necessary. Because of the increased rarity of certain bridge types or the work of certain bridge builders, and because of previously undiscovered engineering or historical factors, it was evident that some non-NRHP-eligible bridges now had more value and merited NRHP-eligibility.

To this end, the Cultural Resources Program of the Oklahoma Department of Transportation conducted a re-evaluation Oklahoma Historic Bridge Survey to re-visit the bridges documented in the previous survey and to update the survey findings. The survey limited its investigation to metal truss bridges and stone and concrete arch bridges, as the 1993 survey did, with the goal of re-evaluating their National Register-eligibility. The survey documented 1,061 bridges and resulted in 213 bridges determined eligible for the National Register of Historic Places. These 213 bridges are a combination of NRHP-eligible bridges documented in the previous survey that remain standing, bridges re-assessed as NRHP-eligible based on the current survey findings, and bridges that the Oklahoma State Historic Preservation Office has designated as NRHP-eligible apart from our survey work—the majority of these are included in historic districts or associated with historic Route 66.

The Oklahoma Historic Bridge Survey constitutes Phase I of a broader bridge survey program that will next progress to a documentation of bridge types not yet subject to statewide survey and NRHP-evaluation. Phase II will consist of a survey of concrete slab, steel stringer, and most other bridge types built before 1970, with special attention to bridges built under the Works Progress Administration and other public works programs.

Survey Procedures

The primary work of the Oklahoma Historic Bridge Survey consisted of field investigations of all the bridges documented in *Spans of Time* to record how many of them remain standing, and to document their condition with photographs and update survey forms. The result was that 922 of the bridges documented in the previous survey remain, including 123 of the bridges designated NRHP-eligible in the previous survey, while 48 of the previous survey's NRHP-eligible bridges were non-extant. Examination of the National Bridge Inventory (NBI) database yielded a number of metal truss and concrete and stone arch bridges not included

in the original survey, and these were documented as well. A small number of bridges of the types under study discovered during field work were also included—most of these were bypassed and abandoned spans. The survey, however, did not document bridges that had been relocated for non-vehicular use. All together, 138 bridges not documented in the 1993 survey were added to the inventory.

Resulting from the survey work is a listing of all the bridges documented and an updated Oklahoma Historic Bridge Inventory with bridges from the original survey found to be non-extant removed. In format, this list is identical to the Oklahoma Historic Highway Bridge Inventory included in *Spans of Time*.

As reflected in the new inventory, a very small number of bridges have been re-classified as a different bridge type than the type assigned to them in the 1989-1992 survey. This change affected primarily stone and concrete arch bridges. In the original survey, concrete arch bridges with stone facing were classified as stone arch bridges; these were re-classified as concrete arch bridges, while the stone arch category was reserved for bridges that have the arch barrel itself constructed of stone. A few new bridge types were discovered, and other bridges were re-classified to correct inconsistencies.

NRHP-Evaluation Criteria

In the re-evaluation of the National Register-eligibility of the bridges documented, the assessment criteria closely mirror those used in the 1989-1992 Oklahoma Historic Highway Bridge Survey. As described in the “Oklahoma Historic Bridge Project Preservation and Management Plan” developed in the previous survey, the main criteria are as follows:

1. A reliable construction date (confirmed through research or bridge plates most often) and the knowledge of a bridge’s builder were valuable. Older, especially pre-World War I bridges, bridges known to come from significant builders of national reputation , and the work of Oklahoma bridge companies and other small companies were noteworthy.
2. Bridges that represent large projects indicating a significant commitment of funds, greater technical achievement, and importance to the local community were carefully considered.
3. Rare and uncommon bridge types, and bridges with unusual design features were specially recognized.
4. Attention was given to a bridge’s retention of original appearance, its condition, its setting, and its quality of workmanship.

Some additional evaluation criteria also applied. These include a bridge type’s rarity within its region (defined as the county where a bridge was located and all contiguous counties), and a bridge’s location on an important transportation route, most often defined as a former or current US Highway alignment.

Bridge Numbering System

The Oklahoma Department of Transportation (ODOT) gives each bridge a structure number derived from the bridge's location on the road system; these numbers identify each bridge in the survey also. Most of those designated as "NO NUMBER" in the survey are not in the ODOT bridge files, usually because they are bypassed and no longer open to traffic or they are too short to be classified as bridges.

County Roads and City Streets

ODOT assigns bridge numbers based on the state's numbered section lines. East-west section lines are numbered beginning with the Kansas-Oklahoma state line as EW-1, or E001.0, and increasing at one mile increments as one travels south. North-south section lines are numbered beginning with the New Mexico-Oklahoma state line as NS-1, or N001.0, and increasing at one mile increments as one travels east. Also used in the bridge numbering system is a county number. The counties are numbered in alphabetical order: Adair County is 01, Alfalfa County is 02, continuing to Woodward County which is 77. In the structure number, the bridge's location is measured in tenths of a mile from the south or east of two intersecting section lines. For example:

36 E011.0 N324.0 00.6

36 Kay County

E011.0 Indicates the bridge is on EW-11, the section line road 11 miles south of the Kansas line.

N324.0 Refers to county road NS-324, the section line road 324 miles east of the New Mexico line. The bridge is to the east of this section line.

00.6 The bridge is located six-tenths of a mile east of the intersection of EW-11 and NS-324.

The following applies to bridges that are not located on section line roads, but instead on roads that parallel section lines:

36 E011.2 N324.2 00.5

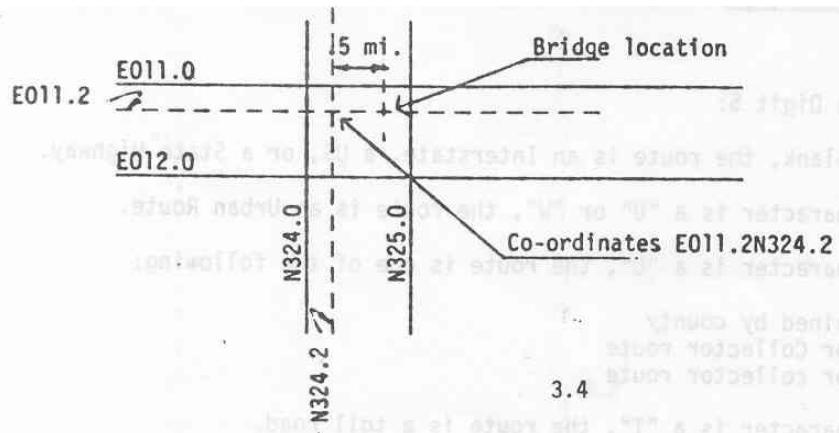

36 Kay County

E011.2 Indicates the bridge is on an east-west road 11.2 miles south of the Kansas

line

N324.2 Indicates the north-south road is 324.2 miles east of the New Mexico line. The bridge is to the east of this road.

00.5 The bridge is located five-tenths of a mile east of the intersection of EW-11.2 and NS-324.2.

The following applies to bridges on roads that are not section lines or parallel to section lines, but instead are diagonal, or meandering, roads:

36 D 011.2 N324.0 01.7

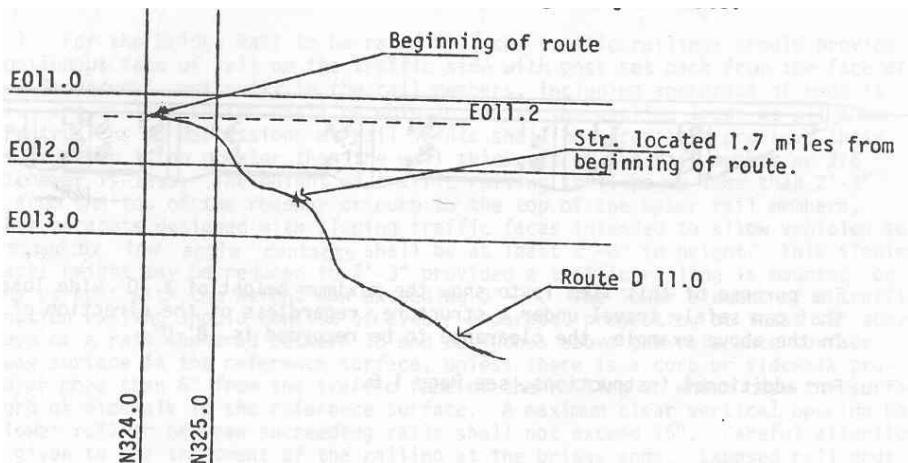

36 Kay County

D Diagonal or meandering route

011.2 Indicates the beginning of the road is 11.2 miles south of the Kansas line

N324.0 Indicates the beginning of the road is 324 miles east of the New Mexico line

01.7 The bridge is 1.7 miles from the beginning of the road

State , Interstate, and US Highways

The structure numbers for bridges on state, interstate, and US highways make use of control sections. Each highway is divided into numbered control sections, which usually have

county lines and intersecting highways as their beginning and ending points, and usually run from west to east and south to north, although there are some exceptions. The Oklahoma Department of Transportation's Planning and Research Division compiles and publishes the Control Section Map Book which defines these control sections and gives their numbers. The structure numbers for state, interstate, and US highway bridges are arranged as follows:

6602 0368 WX

66 Rogers County

02 Control section numbered 02

0368 Milepoint of the bridge site measured from the beginning of the control section to the nearest hundredth of a mile. Bridge is 3.68 miles from the beginning of the control section.

W Bridge is on a divided highway and carries westbound lanes. This digit is omitted when the bridge is not on a divided highway.

X Bridge indicator. If the bridge is on a frontage road or ramp, **F** or **R** will follow the **X**.

Bridges Listed on or Eligible to the National Register of Historic Places

The sections which follow list all of the NRHP-listed or eligible bridges documented in the Oklahoma Historic Bridge Survey: those which are on Historic U.S. Highway 66, those which are part of historic districts, and the rest of the eligible bridges.

Historic U.S. Highway 66 Bridges

The Oklahoma State Historic Preservation Office sponsored the “Oklahoma Route 66 Roadbed Documentation Project (1926-1970): A Survey of Roadbed and Integral Structures,” conducted by the Oklahoma Route 66 Association in 2001-2002. The list below contains all of the metal truss bridges and one concrete arch bridge designated as NRHP-eligible in that survey. Some of these bridges have also been listed on the National Register. The list includes the structure number followed by the county, nearest town, the road the bridge carries, the river or stream under the bridge, and the bridge’s status as NRHP-eligible or listed. **Note:** There are several NRHP-eligible and listed U.S. Highway 66 bridges that are not included in this list because they are design types (steel stringer, for example) which are not documented in the Phase I Oklahoma Historic Bridge Survey.

0504 0278 SXF Modified Pratt through	Beckham County	Sayre vicinity	I-40 service road over Timber Creek	NRHP-eligible
08E1020N2490003 Warren w/verticals, pony	Caddo County	Hydro vicinity	EW-102 over Cedar Canyon Creek	NRHP-listed
08E1020N2520001 C-back pony	Caddo County	Hydro vicinity	EW-102 over Dead Woman Creek	NRHP-listed
0902 0000 X C-back pony	Canadian County	Bridgeport vicinity	US-281 over South Canadian River	NRHP-listed
1806 0724 X C-back pony	Craig County	Vinita vicinity	US-60 over Little Cabin Creek	NRHP-eligible
19E0706N3860000 Parker through truss	Creek County	Sapulpa vicinity	Old US-66/SH-7 over Rock Creek	NRHP-listed
19E0830N3690003 Warren bedstead pony truss	Creek County	Bristow vicinity	EW-83 over Little Dry Fork Creek	NRHP-listed
2004 0411 SXF Warren w/verticals, pony	Custer County	Clinton vicinity	I-40 service road over Bear Creek	NRHP-eligible

41 NO NUMBER Warren w/verticals, pony	Lincoln County	Stroud vicinity	abandoned road over Salt Creek	NRHP-eligible
4124 0157 X C-back pony	Lincoln County	Wellston vicinity	SH-66, Business over Captain Creek	NRHP-listed
41N3570E0860007 Warren w/verticals, pony	Lincoln County	Stroud vicinity	NS-357 over Salt Creek	NRHP-eligible
55E1035N2990004 Mixed truss type	Oklahoma County	Bethany	EW-103.5 over North Canadian River	NRHP-listed
6602 0368 EX Mixed truss type	Rogers County	Catoosa vicinity	SH-66 over Verdigris River	NRHP-eligible
6602 0368 WX Mixed truss type	Rogers County	Catoosa vicinity	SH-66 over Verdigris River	NRHP-eligible
66E0332N4260002 Modified Pratt through	Rogers County	Chelsea vicinity	EW-33.2 over Pryor Creek	NRHP-listed
66E0570N4080006 Truss leg bedstead pony	Rogers County	Catoosa vicinity	EW-57 over Spunky Creek	NRHP-eligible
72 NO NUMBER Concrete arch	Tulsa County	Tulsa	11 th St. (abandoned) over Arkansas River	NRHP-listed

Bridges in Historic Districts

Some historic districts listed on or eligible to the National Register of Historic Places contain bridges as contributing resources. The districts that include bridges documented in the survey are listed below. The lists include the structure number followed by the county, nearest town, the road the bridge carries, the river or stream under the bridge, and the bridge's status as NRHP-eligible or listed. **Note:** There are some bridges in historic districts not included in this section because they are design types which are not included in the Phase I Oklahoma Historic Bridge Survey.

Lake Murray State Park

The following bridges are on the National Register as part of Lake Murray State Park, listed on the National Register in 2001 (#01001097).

10 NO NUMBER	Carter County	Ardmore vicinity	SH-77S over unnamed creek	NRHP-listed
Concrete arch				
43 NO NUMBER 1	Love County	Ardmore vicinity	SH-77S over unnamed creek	NRHP-listed
Concrete arch				
43 NO NUMBER 2	Love County	Ardmore vicinity	SH-77S over unnamed creek	NRHP-listed
Concrete arch				
43 NO NUMBER 3	Love County	Marietta vicinity	SH-77S over unnamed creek	NRHP-listed
Concrete arch				
4314 0270 X	Love County	Overbrook vicinity	SH-77S over unnamed creek	NRHP-listed
Stone arch				

Wintersmith Park Historic District

The following bridges are on the National Register as part of the Wintersmith Park Historic District, listed on the National Register in 2000 (#00000623).

62 NO NUMBER N	Pontotoc County	Ada	Wintersmith over unnamed creek	NRHP-listed
Concrete arch				
62 NO NUMBER S	Pontotoc County	Ada	Wintersmith over unnamed creek	NRHP-listed
Concrete arch				
62N3570E1550001	Pontotoc County	Ada	NS-357 over unnamed creek	NRHP-listed
Concrete arch				

Bluff Park Historic District

The following bridges are National Register-eligible as part of the Bluff Park Historic District, determined eligible by the State Historic Preservation Office in 2000.

11E0764N4510003 Other, concrete (arched girder)	Cherokee County	Tahlequah	EW-76.4 (Choctaw St.) NRHP-over Tahlequah Creek eligible
11E0761N4510004 Other, concrete (arched girder)	Cherokee County	Tahlequah	EW-76.1 (Shawnee St.) NRHP-over Tahlequah Creek eligible

Utica-Woodward Historic District

The following bridges are National Register-eligible as part of the Utica-Woodward Historic District, determined eligible by the State Historic Preservation Office in 1997.

72N3957E0610006 Concrete arch	Tulsa County	Tulsa	N3957 (Yorktown Ave.) NRHP-over Crow Creek eligible
72E0618N3950003 Concrete arch	Tulsa County	Tulsa	E0618 (E 29 th St. S) NRHP-over Crow Creek eligible

Okmulgee Downtown Historic District

The following bridge is on the National Register as part of the Okmulgee Downtown Historic District, listed on the National Register in 1992 (#92001693).

5620 1722 X Stone arch	Okmulgee County	Okmulgee	SH-56 (6 th St.) over Okmulgee Creek	NRHP-listed
---------------------------	-----------------	----------	---	-------------

Medicine Park Historic District

The following bridge is National Register eligible as part of the Medicine Park Historic District, determined eligible by the State Historic Preservation Office in 2000.

16E1579N2510005 Warren w/verticals, pony	Comanche County	Medicine Park	EW-157.9 (South St.) over Medicine Creek	NRHP-eligible
---	-----------------	---------------	--	---------------

Osage Hills State Park Historic District

The following bridge is National Register eligible as part of the Osage Hills State Park Historic District, determined eligible by the State Historic Preservation Office in 1993.

5726 0085 X Concrete arch	Osage County	Oakridge vicinity	Park Rd. 10 (SH-35) over unnamed creek	NRHP-eligible
------------------------------	--------------	-------------------	--	---------------

National Register-Eligible Bridges

What follows is the complete list of National Register-eligible metal truss and stone and concrete arch bridges documented in the survey, organized by bridge type. This section includes the NRHP-eligible bridges documented in the previous survey that remain standing, bridges re-assessed as NRHP-eligible based on the current survey findings, and all the historic district and U.S. Highway 66 bridges enumerated above that the Oklahoma State Historic Preservation Office has designated as NRHP-eligible apart from the survey. The list accompanying each bridge type includes the structure number followed by the date of construction, county, nearest town, the road the bridge carries, and the river or stream under the bridge.

Pratt Pony Truss

Structure #02E0090N2680009

Pratt pony trusses have vertical beams that are heavier and carry compressive (pushed together) forces, and diagonal beams that are lighter and carry tensile (pulled apart) forces. The diagonal beams are inclined outward from the center pointing toward the ends of the truss, and most often one or more diagonals inclined in the opposite direction will form an “X” pattern in the center of the truss.

02E0090N2680009	1915	Alfalfa County	Bryon vicinity	EW-9 over Big Sandy Creek
Pratt pony				
02E0280N2510004	1916	Alfalfa County	Carmen vicinity	EW-28 over Eagle Chief Creek
Pratt pony				

03E1660N3930003 Pratt pony	1920	Atoka County	Chockie vicinity	EW-166 over North Boggy Creek
07N3650E2190009 Pratt pony	1921	Bryan County	Colbert vicinity	NS-365 over Sand Creek
16E1690N2580007 Pratt pony	1966	Comanche County	Lawton vicinity	EW-169 over Cache Creek
19E0815N3720005 Pratt pony	1913	Creek County	Bristow vicinity	EW-81.5 over unnamed Creek
39N4520E1370005 Pratt pony	1918	Latimer County	Red Oak vicinity	NS-452 over Bear Creek
41E0840N3500003 Pratt pony	1913	Lincoln County	Parkland vicinity	EW-84 over North Branch Creek
52E0470N3230007 Pratt pony	1909	Noble County	Perry vicinity	EW-47 over unnamed creek
59E0480N3580008 Pratt pony	1918	Pawnee County	Blackburn vicinity	EW-48 over Hellroaring Creek
60E0690N3190004 Pratt pony	1905	Payne County	Perkins vicinity	EW-69 over Clear Creek
74N4025E0300007 Pratt pony	1911	Washington County	Ramona vicinity	NS-402.5 over Timberlake Creek

Pratt Half-Hip Pony Truss

Structure #19N3630E0640009

Pratt half-hip pony trusses are Pratt trusses with a modification. Unlike a standard Pratt, a half-hip Pratt has no vertical at the juncture of the top chord and the inclined end post. In other words, it has no hip vertical.

06E0695N2590005 Pratt half-hip pony	1950	Blaine County	Hitchcock vicinity	EW-69.5 over unnamed creek
16E1560N2640005 Pratt half-hip pony	1910	Comanche County	Elgin vicinity	EW-156 over Nine Mile Beaver Creek
16E1650N2360001 Pratt half-hip pony	1910	Comanche County	Indiana vicinity	EW-165 over Sandy Creek
19E0750N3750002 Pratt half-hip pony	1932	Creek County	Kellyville vicinity	EW-75 over unnamed creek
19N3630E0640009 Pratt half-hip pony	1910	Creek County	Oilton vicinity	NS-363 over Dry Creek
19N3900E0730005 Pratt half-hip pony	1914	Creek County	Keifer vicinity	NS-390 over Childers Creek

24N2890E0510003 Pratt half-hip pony	1906	Garfield County	Enid vicinity	NS-289 over unnamed creek
32N3766E1490004 Pratt half-hip pony	1910	Hughes County	Gerty vicinity	NS-376.6 over Little Sandy Creek
36E0040N3220006 Pratt half-hip pony	1911	Kay County	Braman vicinity	EW-4 over Bitter Creek
36E0270N3250005 Pratt half-hip pony	1902	Kay County	Tonkawa vicinity	EW-27 over unnamed creek
36N3210E0090006 Pratt half-hip pony	1915	Kay County	Blackwell vicinity	NS-321 over unnamed creek
41E0760N3420003 Pratt half-hip pony	1907	Lincoln County	Agra vicinity	EW-76 over Brush Creek
59E0530N3580009 Pratt half-hip pony	1927	Pawnee County	Hallett vicinity	EW-53 over Ranch Creek
60N3300E0530009 Pratt half-hip pony	1910	Payne County	Stillwater vicinity	NS-330 over Long Branch Creek

Warren with Verticals Pony Truss

Structure #30N1940E0210009

Warren with verticals pony trusses have, in addition to verticals, diagonal beams that carry both compressive and tensile forces and form a “W” pattern.

02E0210N2740005	1911	Alfalfa County	Jet vicinity	EW-21 over unnamed creek
Warren w/verticals, pony

Double Intersection Warren Pony Truss

Structure #54N3900E1180003

In appearance like a lattice, the double intersection Warren pony truss consists of two Warren trusses superimposed upon each other.

54N3900E1180003	1910	Okfuskee Double intersection Warren pony	County	Weleetka vicinity	NS-390 over Stidham Creek
-----------------	------	---	--------	----------------------	------------------------------

Parker Pony Truss

Structure #51N4120E0910006

Parker pony trusses are another modification of the Pratt design. Verticals are in compression, while diagonals are in tension and inclined outward from the center pointing toward the ends of the truss, and most often one or more diagonals inclined in the opposite direction will form an “X” pattern in the center of the truss. Parker pony trusses have a polygonal, or curved, top chord instead of the flat top chord of a standard Pratt.

King Post Pony Truss

Structure #72N4065E0710002

One of the earliest and simplest bridge types, the king post pony truss is triangular-shaped with a single vertical connecting the bottom chord to the inclined posts.

Pratt (Small, 3-Panel) Pony Truss

Structure #24E0300N2800004

The small, 3-panel Pratt pony truss is a variant of the Pratt with only two verticals dividing it into three panels. A lengthened version of the king post pony truss is also a fitting description of this bridge type.

Truss Leg Bedstead Pony Truss

Structure #07N3910E1990001

A truss leg bedstead pony truss has endpoints that are vertical, rather than inclined, and they extend below the bottom chord into the stream bed or bank to support the bridge. The verticals and diagonals follow the Pratt pattern, with verticals in compression and diagonals in tension inclined outward from the center pointing toward the ends of the truss, and most often one or more diagonals inclined in the opposite direction forming an “X” pattern in the center of the truss.

Warren Bedstead Pony Truss

Structure #19E0830N3690003

Another type of bedstead pony truss, with vertical endpoints which extend below the bottom chord to support the bridge, is the Warren bedstead pony truss. Like a Warren with verticals pony truss, there are verticals along with diagonals that carry both compressive and tensile forces and form a “W” pattern.

Pratt Through Truss

Structure #40E1420N4650007

Through trusses, unlike pony trusses, have bracing over the top of the roadway which ties the upper chords of the bridge together. Pratt through trusses have vertical beams in compression and diagonal beams which are in tension and inclined outward from the center pointing toward the ends of the truss, and most often one or more diagonals inclined in the opposite direction forming an “X” pattern in the center of the truss.

Pennsylvania (Petit) Through Truss

Structure #72N3950E0460005

The Pennsylvania (petit) through truss, with a curved top chord, is a modification from the Parker design. Those documented in Oklahoma have horizontal struts, verticals divided at the center into two different-sized sections, and some shorter diagonals which end at these divided verticals. In outline, this bridge type is in some ways similar to the K through truss and the modified Parker through truss.

Parker Through Truss

Structure #57E0441N3590006

Parker through trusses are a modification of the Pratt design. Vertical beams are in compression and diagonal beams are in tension and inclined outward from the center pointing toward the ends of the truss, and most often one or more diagonals inclined in the opposite direction form an "X" pattern in the center of the truss. Parker through trusses have a polygonal, or curved, top chord instead of the flat top chord of a standard Pratt.

Stone Arch

Structure #36N3385E0070002

In this bridge type, an arch constructed entirely of stone below the roadway supports the loads transmitted from the bridge deck.

36N3385E0070002	1930	Kay County	Newkirk vicinity	NS-338.5 over Deer Creek
Stone arch				
36N3390E0090002	1914	Kay County	Newkirk vicinity	NS-339 over Wolfe Creek

Summary of Survey Findings

Because of the amount of time elapsed since the 1993 Oklahoma Historic Highway Bridge Survey and the resulting need to revise the survey findings to reflect an updated status of the bridges, the ODOT Cultural Resources Program conducted the Oklahoma Historic Bridge Survey completed in 2007. The 1993 survey documented 1,555 bridges and designated 171 of them as National Register-eligible. The current survey documented 1,061 bridges. The SHPO has designated 27 of these bridges as eligible independently of this survey, and 123 of the 171 bridges designated as eligible in the previous survey remain standing as of their survey date for this study. Based upon this study, 63 additional bridges are now considered National Register-eligible, for a total of 213 NRHP-eligible bridges.

Bridge Types Table: Comparing the 1993 and 2007 Surveys

Bridge Type	1993 Survey		2007 Survey	
	Total number	NRHP-eligible number	Total number	NRHP-eligible number
Pratt pony truss	133	14	74	12
Pratt half-hip pony truss	129	13	63	14
Warren with verticals, pony	564	21	315	24
Warren, polygonal top chord, pony	14	4	10	6
Double-intersection Warren pony	1	1	2	1
Parker pony	6	4	5	4
Camelback pony	173	8	147	12
King post pony	1	1	2	2
Pratt (small, 3-panel) pony	35	3	16	4
Truss leg bedstead pony	62	17	31	12
Warren bedstead pony truss	12	5	7	5
Other, pony truss	2	0	4	0
Pratt through	87	15	54	19
Modified Pratt through truss	45	1	38	5
Modified Parker through truss	5	1	7	1

Warren through	1	1	1	1
Warren with verticals through	1	1	1	1
Warren with verticals, polygonal top chord through	0	0	1	1
