ITEM: LAB STATISTICS REPORT

REVISED: 03/13/2007

LAB STATISTICS REPORT

This report could be used to produce a list of labs and information concerning how many samples that lab is testing. Selection criteria includes; entire state, geographic area, and geographic area + lab ID. In limited testing the only selection that appears to function properly is the "entire state" selection. Information about lab samples includes; total samples, samples pending, and samples outstanding, samples completed. ~~At the time this policy was written, there was insufficient information in the database to verify the report was returning valid data.~~ Additional testing indicates that the report's primary key is geographical area; therefore each lab is listed under every geographical area, rendering this report useless for any type of useful summary. **Unless functionality improves, removing access to this report from all group securities should be considered during the next upgrade.**

MATADMIN, MATIASS, MATSTA, MATTEST, MATAUTH, MATINQUERY, RESADMIN, RESLABMN, RESLABTC, shall have rights to this report.

Changes to previous versions of this Policy:

3/13/2007: Reviewed for 3.7b upgrade. Added comments about the output of the report and its lack of usefulness.
